Summary

MERN Full Stack Developer with hands-on experience shipping 3+ production-style applications featuring authentication, payments, and role-based dashboards, now building enterprise React.js interfaces as a Developer Intern at Aabasoft Technologies. Comfortable owning a feature end-to-end – from REST API design to responsive UI – with a focus on secure, scalable, and maintainable code.

Technical Skills

Frontend: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, React Query, Zustand, React Hook Form

Backend: Node.js, Express.js, Socket.IO, Mongoose

Database: MongoDB, MySQL

Cloud & Integrations: AWS S3, Cloudinary, Stripe API, Nodemailer

Auth & Security: JWT, RBAC, Google OAuth, Zod

Tools & Libraries: Git, GitHub, Postman, Axios, React Router, React Toastify, Recharts, jsPDF, html5-qrcode

Deployment: Vercel, Netlify, Render

Experience

React Developer Intern — Aabasoft Technologies

Jan 2026 – Present

Technopark, Thiruvananthapuram

- Built reusable React.js components for an enterprise Tea Estate Management System, cutting duplicate UI code across 7 modules.
- Converted Figma designs into pixel-accurate, responsive React.js interfaces used across desktop and mobile views.
- Integrated REST APIs using Axios and modern hook-based state management, reducing unnecessary re-renders and improving perceived load time.
- Collaborated directly with backend and QA teams in an Agile workflow to ship production-ready features on schedule.

MERN Full Stack Developer Trainee — Luminar Technolab

Jul 2025 – Jan 2026

Thiruvananthapuram

- Designed and deployed 3+ full-stack MERN applications, each with authentication and role-based access control for multiple user types.
- Built RESTful APIs handling end-to-end CRUD operations, secured with JWT authentication and input validation.
- Structured applications using MVC architecture, cutting duplicate logic and easing feature additions across the code-base.
- Built reusable frontend components and modular backend services to support scaling to new features without rework.

Projects

CineBook – Movie Ticket Booking Platform (MERN)

GitHub | Live Demo

- Built a real-time seat booking engine (React.js, Node.js, Express.js, MongoDB) preventing double-booking across concurrent users via Socket.IO.
- Integrated Stripe payments end-to-end with jsPDF-generated QR e-tickets, and built a Recharts admin dashboard for bookings and revenue.
- Implemented JWT + Google OAuth authentication with RBAC for admin/user roles, and AWS S3 for poster/media uploads.

Doctor Appointment Booking & Management System (MERN)

GitHub | Live Demo

- Built a three-sided healthcare platform (Admin, Doctor, Patient) with distinct dashboards and permissions for each role.
- Implemented appointment scheduling with conflict checks, Stripe payments, and Cloudinary-based document uploads.
- Secured the platform with JWT + Google OAuth and exposed RESTful APIs consumed by all three dashboards.

Tea Estate Management System (MERN)

- Built an enterprise workforce-tracking application with interactive map views for real-time field activity monitoring.
- Designed advanced filtering and role-based dashboards so supervisors and admins see only relevant, permissioned data.
- Secured REST APIs with Axios interceptors and JWT authentication, structured for scale across multiple estates.

Education

Master of Computer Applications (MCA)

2023 – 2025

CHMM College for Advanced Studies

Bachelor of Science in Mathematics

2019 – 2022

Sree Narayana College, Varkala
